At North State Products, we understand the importance of safety and security when it comes to controlling access to your premises. That's why we are proud to present the "Safe Gate Guard", an innovative retrofit solution designed to enhance the safety of your gate system.

Key Features:

Reliable: The Safe Gate Guard's sturdy construction ensures reliability in any condition, providing long-lasting fall protection for your gate system.

Versatile: The retrofit is compatible with any cantilever gate system. No matter what the circumstances are, the retrofit can be seamlessly integrated, offering comprehensive protection.

Easy Installation: The retrofit has been engineered to offer a hassle-free installation.

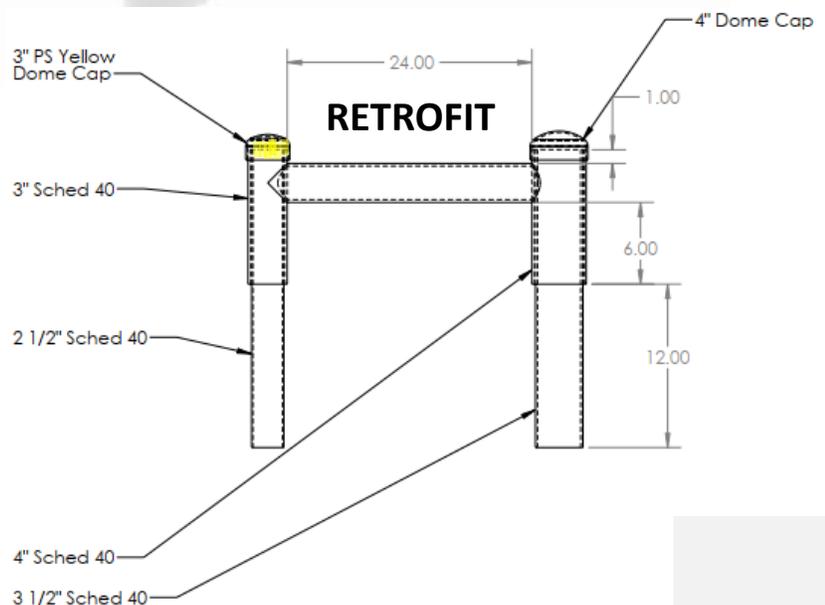

Benefits:

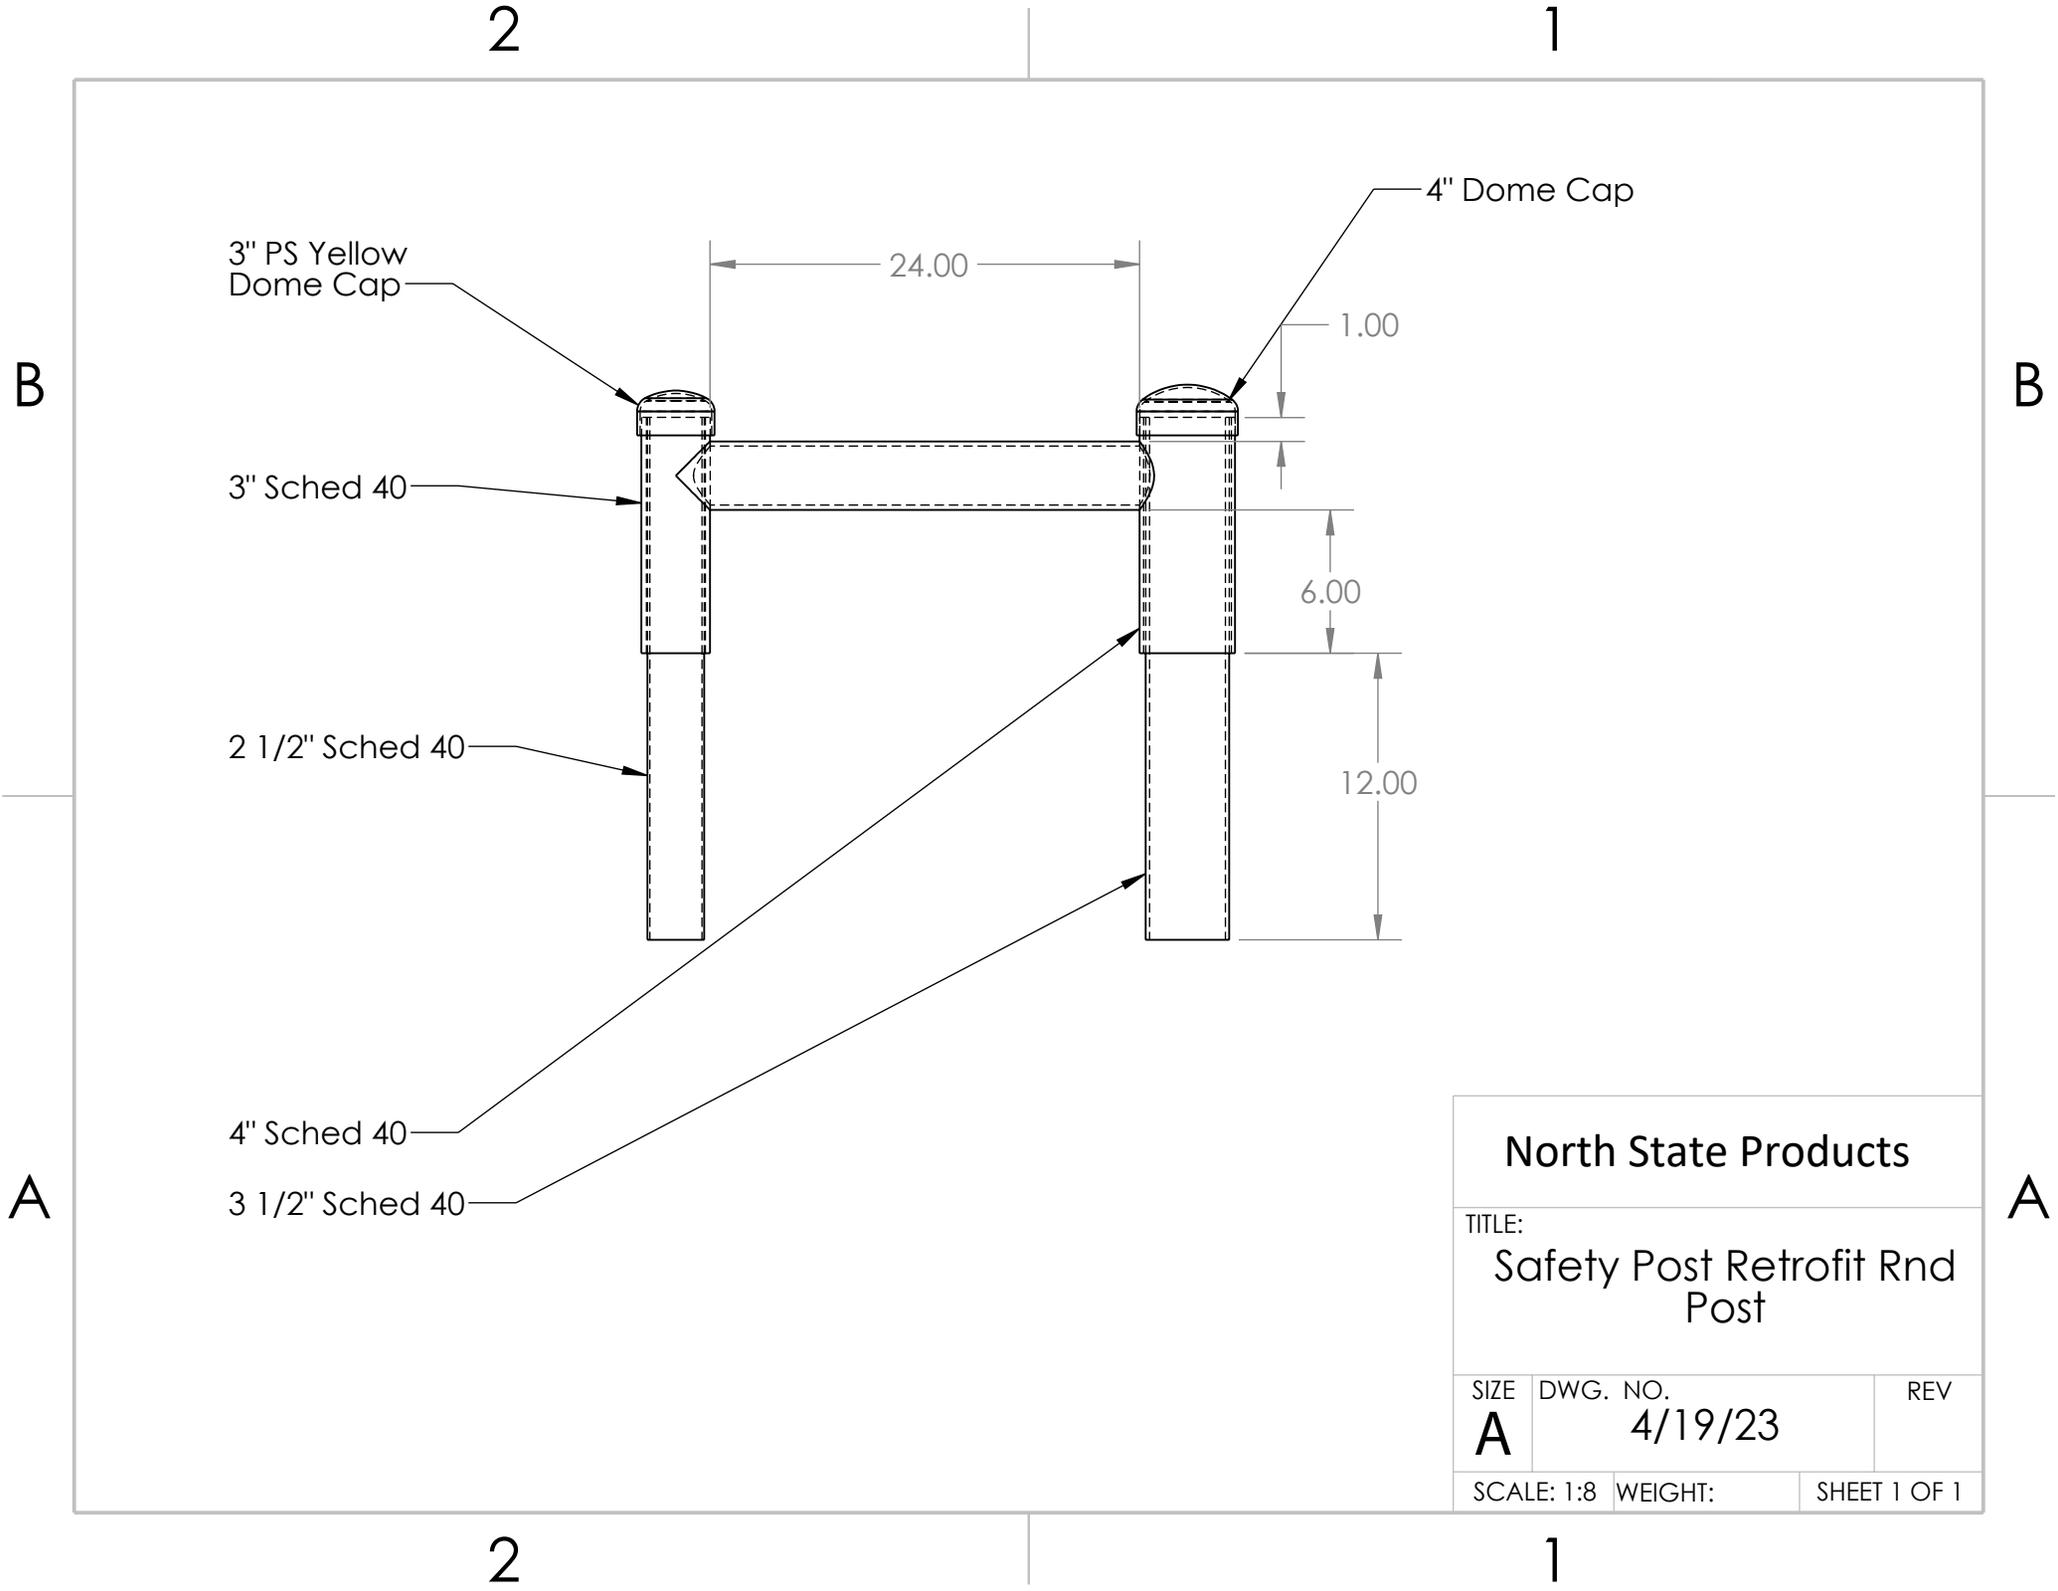

- By implementing the retrofit, you prioritize the safety of pedestrians, vehicles, and your property.
- Minimize the risk of fatal accidents.
- By investing in this reliable solution, you can be confident that you are fulfilling your legal obligations and provide a safe environment for all.
- Shows your commitment to safety and demonstrates you are willing to invest in the well-being of everyone.

ASTM Standards

F2200 – Ensure that the gate cannot fall if it becomes detached from its supporting hardware.

F1184 – Guidepost for all Class I gates equal to height of the gate shall be installed adjacent to each gate support post. The gate shall slide between the gate support posts and the guidepost(safety post). Guidepost shall be the same as, or one diameter smaller than the gate support post.
